EDUCATION

B.S. Computer Engineering, Purdue University

Aug 2024 - May 2028

- Current GPA: 4.0 / 4.0
- **Relevant Coursework:** Data structures and Algorithms; Signals and Systems; Microprocessor Systems And Interfacing; Digital Electronics; Probabilistic Methods, Electromagnetics
- **Organizations:** (Skinapse Labs) Machine Learning @ Purdue, Artificial Intelligence in Music VIP, Snowball Lab @ Purdue, GeoML @ Purdue

WORK EXPERIENCE

R&D Engineering Intern, Fujikura, America Fujikura Ltd (AFL) - Westford, MA

Jun 2025 - Aug 2025

- Engineered Laser diode driver prototype: personally manufactured, developed, tested, and presented a successful working prototype of new product 24-fiber multi-fiber visual fault locator (8-fiber MT Tracer Source; STM32 MCU; USB protocols) under supervision of Principal R&D Optical Engineer.
- Demonstrated working functionality, specifications, and quality control (FCC safety regulations pass) in presentations to Product Manager and entire company branch (+30 attendance in-person + remote).
- Progressed product development cycle by 1 phase, delivery passed proof-of-concept stage.
- Gained strong analytical skills for datasheet analysis, design software, git, bitbucket

Staff, Kimball Farm - Westford, MA

May 2025 - Jun 2025

- Communication with customers (~1000 daily); gained interpersonal communication skills

CERTIFICATES AND AWARDS

- Fundamentals of Deep Learning Certificate, NVIDIA Mar 2026
- Electrical and Computer Engineering General Scholarship, Purdue Mar 2026

EXPERIENCE AND LEADERSHIP

Researcher, Snowball Labs

Feb 2026 - Present

- Built custom keyword spotting deep neural network (95% validation accuracy in training) optimized for edge devices and embedded systems under edge impulse framework.
- Deployed to arduino nano 33 using quantization, reducing model size by 81%, and hyperparameter tuning.

Software Engineer, Skinapse Labs

Jan 2026 - Present

- Engineered custom machine learning architecture for acne detection with end to end functionality: CNN backbone, region proposal network neck, and image classification head.

Design lead, EPICS (Engineering Projects in Community Service):

Aug 2024 - Jan 2026

- Responsible for leading weekly meetings, bi-semester design reviews with 20+ audience members.
- Spearhead test-bench creation for debugging custom PCBs, including full integration testing.
- Led key administrative duties for team of 5 other students in realistic working environment (documentation, GANTT charts, responsibility management, troubleshooting, goal setting).

PROJECTS

Nook:

- Built agentic workflow external API tool calls and frontend LLM chatbot for apartment finder app.
- Winner for Code for Humanity track in Purdue's Claude Builder Club's 2026 hackathon.

End-to-End User Status Screen:

- Engineered frontend (react) and backend (Firebase datastore, auth, functions) of end-to-end ai-integrated game-like 'self status screen'. Employs custom back-propagation algorithm during user analysis.
- Participant of Gemini 3 hackathon with live deployment using firebase, maintaining 100% uptime.

TECHNICAL SKILLS

- Languages: Python, Bash, C, C++, Java, MATLAB, Javascript, Typescript, HTML5, CSS, C#, SQL
- Libraries: tensorflow, pytorch, numpy, Arduino, React.js, nRF, STM, Firebase
- Hardware: circuit design, SPICE, Kicad, PCB design, SystemVerilog, Solidworks
